Contact transmission includes direct contact or indirect contact. Person-to-person transmission is a form of direct contact transmission. Here the agent is transmitted by physical contact between two individuals (Figure 1) through actions such as touching, kissing, sexual intercourse, or droplet sprays. Direct contact can be categorized as vertical, horizontal, or droplet transmission.

Evidence regarding human-to-human transmission Information to date suggests that these viruses does not transmit easily from human to human, and does not support sustained human-to-human transmission. A total of 14 family clusters<sup>1</sup>have been reported, with no new clusters since the last update.

**Summary of surveillance and investigation findings**

Although transmission of CPXV has been confirmed from cats and cows to humans (black arrows) (1,2), transmission from rodents, commonly mice, to cats and cows is suspected but still unproven (red arrows) . Rats have been confirmed as vectors for CPXV transmission to monkeys and humans (4,7). A complete chain of CPXV infection is verified from ...
